

FlaskForm

```
classDiagram
    class FlaskForm
    class main_RegisterForm["main.RegisterForm"] {
        +username
        +password
        +password_again
        +submit
    }
    main_RegisterForm --|> FlaskForm
```

The diagram illustrates a class hierarchy. At the top is the 'FlaskForm' class, represented by a rectangle with three horizontal compartments. The top compartment contains the class name 'FlaskForm', while the two lower compartments are empty. Below it is the 'main.RegisterForm' class, represented by a rectangle with three horizontal compartments. The top compartment contains the class name 'main.RegisterForm'. The middle compartment contains a list of attributes: '+ username', '+ password', '+ password\_again', and '+ submit'. The bottom compartment is empty. A blue arrow with an open triangular head points from the top of the 'main.RegisterForm' class to the bottom of the 'FlaskForm' class, indicating that 'main.RegisterForm' inherits from 'FlaskForm'.

main.RegisterForm

+ username  
+ password  
+ password\_again  
+ submit
