

Resource

```
classDiagram
    class Resource
    class main_register["main.register"] {
        +get()
        +post()
    }
    main_register --|> Resource
```

The diagram illustrates a class hierarchy. At the top is a class named 'Resource' with three empty compartments. Below it is a class named 'main.register' with three compartments: the top one contains 'main.register', the middle one is empty, and the bottom one contains '+ get()' and '+ post()'. A blue arrow with an open triangle head points from 'main.register' to 'Resource', indicating that 'main.register' inherits from 'Resource'.

main.register

+ get()
+ post()
